(a) $\sum_{j \le n} t_j^2$ (Feldman–Hájek quantity)
$t_j = 0.2$ (iid)
$t_j = j^{-1/4}$
$t_j = 1/j$
n
(b) Hellinger affinity $\prod_{j \le n} \rho_j$ (overlap of P and Q)
n
(c) error of best one-sample test
n
(d) $t_j = 0.2$ (iid), n = 10^4: error 0.000
from P
from Q
log dQ/dP of one sample
(e) $t_j = j^{-1/4}$, n = 10^4: error 0.000
log dQ/dP of one sample
(f) $t_j = 1/j$, n = 10^4: error 0.373
log dQ/dP of one sample
