(a) one sample each, same white noise
reference τ=1, κ=6
range change τ=1, κ=2
amplitude change τ=1.3, κ=6
(b) coefficient variances $\tau^2/(\kappa^2+\lambda_j)^2$
mode j
(c) whitened ratio t_j
range: $t_j \to 0$
amplitude: $t_j = 0.69$
mode j
(d) $\sum_{j \le n} t_j^2$: converges vs grows $\propto n$
range change
amplitude change
n modes
